

**Cozy Products Introduces the
Energy-Saving Solution to Stay
Warm All Winter Long!**

For Immediate Release
November 22, 2010

Chicago, IL, November 2010 – Cozy Products, the leading innovator in energy-efficient heating solutions introduces the Eco-Save Heater. This high performance, low-wattage safe heater keeps you warm and productive all season, without driving up costly electric bills. Traditional space heaters use 1500-2500 watts, become dangerously hot and guzzle energy. The energy-efficient, 750 watt Eco-Save Heater reduces electricity costs, prevents dangerous circuit overload and reduces the risk of fire.

The sleek, ergonomic shape is designed to fit any décor, making it ideal for desktops, hallways, counters and shelves. Heat your space without overheating the entire room while you stay warm and cozy. Lowering the room thermostat just a few degrees can drive down heating bills during those cold winter months saving you more money!

The Eco-Save Heater's powerful 750 watt performance can easily warm smaller rooms. A fully adjustable thermostat uses only the energy you need to warm your space – not the planet. Much safer than traditional heaters, it automatically shuts off when tipped-over, making it a safe warming alternative for everyone, including small children and the elderly.

Cozy Products continues to develop the world's safest, low-wattage, energy-efficient heating solutions indoors and out. Cozy Products supports energy-saving alternatives that protect the environment, save money and promote safety. For more energy-saving tips and product information, visit www.cozyproducts.com.
